

GREEN ACRE FARM & NURSERY

Oklahoma Rose

Rosa 'Oklahoma'

Height: 5 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 6b

Group/Class: Hybrid Tea Rose

Description:

Stunning, large, dark red velvety blooms with a pleasing old rose fragrance, complimenting rich green foliage; great for the garden, containers, or along borders; disease resistant

Ornamental Features

Oklahoma Rose features showy fragrant fully double dark red flowers at the ends of the branches from late spring to mid fall. The flowers are excellent for cutting. It has green deciduous foliage. The oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Oklahoma Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Oklahoma Rose is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Oklahoma Rose will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
